BELLAN LOCKING SOLUTIONS

Tough solutions for a tough world

- BELLAN SLAM LOCK
- BELLAN DEADLOCK
- BELLAN ARMADILLO LOCK
- BELLAN MIMIC LOCK
- OE HIGH SECURITY UPGRADE REPLACEMENT LOCK
- 'OVER THE AIR' KEYLESS LOCKING SOLUTIONS

The security of commercial vehicles and driver safety are of maximum importance. That's why Bellan provides innovative locking products that deliver powerful security and peace of mind.

Our unique purpose-built locking solutions make a huge difference to the safe operation of all classes of commercial vehicle for improved performance and security.

Designed to perform

Bellan locking solutions are the ONLY purpose-made commercial vehicle security locks. We are the only lock suppliers that use Automotive Specific locks, unlike competitors who actually use household locks adapted for motor vehicle application.

Bellan's powerful locking solutions are designed to integrate with existing locks and build on a vehicle's inherent strengths to increase the overall level of security and so prevent and deter thieves.

Bellan locks are engineered for strength and performance that exceeds industry standards. For example, our anti-drill and anti-pick lock cylinders are constructed of corrosion-resistant material that can be keyed alike with other locks, while our zinc-plated lock casements are also designed to be drill resistant.

As an additional benefit, Bellan's vehicle locks can be used in a single-handed operation. That's because Bellan locks incorporate an internal flap that helps prevent dust and particles entering the mechanism while maintaining easy key access.

The highest quality components and innovative design – including fewer moving parts and a unique cable protection feature – ensure that Bellan products provide great reliability and precise operation.

FACT: THE AVERAGE CRIMINAL NEEDS JUST 10 SECONDS TO PICK A STANDARD LOCK AND BREAK INTO A VEHICLE

- BELLAN – THE ONLY PURPOSE-MADE AUTOMOTIVE LOCKS
- FIRST CHOICE FOR MANY OF THE UK'S LARGEST FLEETS
- PERFORMANCE-TESTED BY LEADING MOTOR MANUFACTURERS
- UNRIVALLED QUALITY AND STRENGTH ACROSS THE ENTIRE BELLAN RANGE

Bellan Slam Lock

The Bellan Slam Lock with its simple, single-handed operation can be fitted to both side and rear doors of the vehicle and features a pick-proof key and barrel control mechanism. Simply shut the door and the lock engages and cannot be opened again without the key.

A steel shielding plate prevents would-be thieves from drilling through the door to tamper with the lock. To unlock, the driver disengages the central locking, inserts and turns the key in the Bellan Slam Lock and simply pulls the door open.

The Bellan Slam Lock is designed to meet the security demands of companies with mobile workforces and any applications involving frequent multi-drop delivery, where regular and unrestricted access to vehicles is required.

Bellan Deadlock

This powerful additional security measure takes the form of a mortice deadlock that has been developed specifically for hollow metal doors. Featuring high grade, anti-corrosion materials with self-lubricating brass cylinders for low maintenance and high performance.

As a purpose-built lock the Bellan Deadlock can be fitted to any commercial vehicle, with specific case sizes, cylinder lengths and lock keeps adjusted to suit the vehicle in question.

The fully closed body contains two hardened steel rollers in the bolt to prevent cutting with a hacksaw. This lock's dead bolt has been pressure tested to 4 kilo Newtons: a level that will prevent being levered by any crowbar.

FACT: DID YOU KNOW THAT IN AN AVERAGE YEAR, ONE IN EVERY 50 LCVs IS LIKELY TO BE STOLEN? SOURCE: GOVERNMENT REPORT TBC

The Bellan Mimic Lock

The Bellan Mimic Lock is a high security slam lock designed to replace and upgrade the OEM lock control mechanism in rear and side doors while maintaining the outward appearance of a standard lock.

The Bellan Mimic Lock protects principal points of entry, and prevents access by an intruder popping open the vehicle's own door handles. Since the Bellan Mimic Lock fits neatly into the aperture created by removing the door handles there is no need to cut, drill or otherwise interfere with the door itself while installing this lock.

Steel shielding plates are fitted to protect the adapted connecting rods so further enhancing the security of the vehicle. In addition, by using the vehicle's OEM catch mechanism, the strength of the slam lock is far superior to alternative add-on locks and is capable of withstanding many tons of pulling pressure.

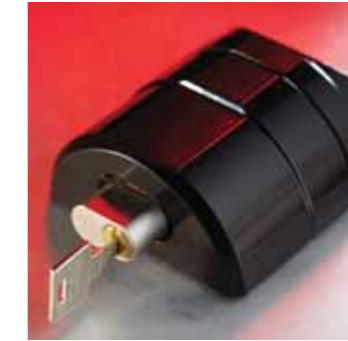

BELLAN LOCKS IN ACTION

"We have worked with Bellan for several years now to provide a number of our largest customers with high security locking systems for their commercial vehicle fleets. The Bellan Slam Lock is a robust, dependable locking solution and we are delighted to endorse both this product and the company itself."

**Martin Rogers – General Sales Manager
Strategic Accounts, Lombard Vehicle Management**

"Thank you for the efficient and reliable service. We are 100% satisfied with the Bellan locks that have been fitted and would use and recommend you for any of our future requirements."

Colin Carruthers, Air Products plc

The Armadillo Lock

The Bellan Armadillo Lock is an innovative limpet-style lock designed to fit on the exterior of both side and rear doors of any vehicle. In addition to the Armadillo Lock's intrinsic strength, its distinctive design gives this lock a strong physical presence, thereby enhancing the deterrent effect on any would-be thieves.

The Armadillo Lock is an externally-mounted two-part limpet lock consisting of a return and keep: the return housing the locking mechanism fits over a ridged keep, so increasing its resistance to being prised open.

The locking mechanism is positioned in its housing to protect against drilling, and is aligned so that the key is inserted parallel to the vehicle's door panels. This reduces the risk of both tampering and particle ingress.

The Armadillo Lock meets the requirements of vehicle operators who need to secure tools and equipment, especially when on sites or parked for longer periods in vulnerable situations.

VEHICLE SECURITY PLUS

OE High Security Upgrade Replacement Lock

Replacement high security lock that protects vehicles against the expensive repair costs of ordinary vehicle locks that have been 'screwdrivered.' With a diameter of 50mm rather than the industry standard 30-35mm the face protects the damaged vehicle against the unnecessary costs of new doors, re-spray, labour and lost contents, while enhancing the security of your vehicle.

Bespoke 'Over the Air' Keyless Remote Locking Solutions

In addition to offering the best mainstream locking solutions, Bellan provides innovative keyless solutions. For example, we have pioneered 'over the air' solutions where access is controlled remotely using not keys but a unique code. The locking system can be shut down and not released until arrival at a pre-determined location using the appropriate password or security code.

Available using both pneumatic and solenoid activation, our remote locking solutions are simple to use, embrace the existing mode of operation, involve little training or changes in working practices and can be introduced with little or no disruption to day-to-day activity.

The Bellan Handle Deflector

This easy to install deflector prevents the use of any object being placed in between the door handles striking the internal handle to force the door open. No drilling or fixings are required as the plate fixes directly under the door handle using existing screws to hold handles in place.

Spare Wheel Clamp

Typically spare wheels are secured on vehicles by unprotected cables that can be easily cut causing the spare wheel to drop. The Spare Wheel Clamp secures the spare wheel in place preventing access to the cable and safeguarding the operator against this expensive loss.

To make your commercial vehicles even more secure, Bellan has developed a series of additional safety products, from handbrake release alarms to side and rear door alarms. Please contact Bellan for further details relating to any of these products.
