Improving performance • Increasing security • Enhancing safety

# VAN ESSENTIALS

Bellan has pioneered a range of unique products for vans, each designed to help you meet today's commercial and operational challenges

## Protect your van doors against screwdriving

### Bellan Handle Deflector

A recognised weakness in many commercial vehicles is the small gap around the door handles which allows a criminal to insert a tool to lever the door open.

The Bellan Handle Deflector is an easily-fitted metal plate which prevents any object being placed in the opening to force the internal handle.

As these before and after pictures demonstrate, what was once a vulnerable area is now securely protected.

## Bellan vehicle locks for greater vehicle security

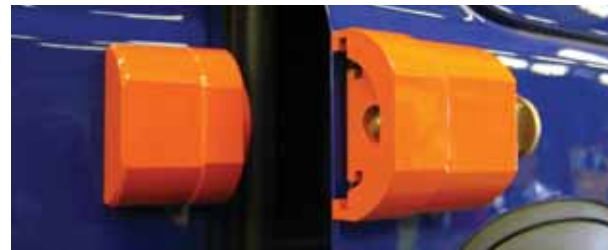

Criminals need just a few seconds to force a standard lock and break into a vehicle. In an average year, one in every 50 LCVs is stolen. Fit Bellan locks and you instantly make your vehicle a great deal more secure. That's because Bellan locking solutions are the ONLY purpose-made commercial vehicle security locks.

### Bellan Mimic Lock

The Bellan Mimic Lock is a unique high security slam lock that replaces and upgrades the OEM lock control mechanism in rear and side doors while maintaining the appearance of a standard lock.

### Bellan Armadillo Lock

Now specified by one of the largest van fleets in the UK, the Bellan Armadillo Lock is an innovative limpet-style lock designed to fit on the exterior of both side and rear doors of any vehicle.

## Locking clamps prevent theft of spare wheels

### Bellan Spare Wheel Clamp

Typically, spare wheels are only secured on vehicles by unprotected cables that can easily be cut. Now you can protect yourself against the theft of expensive spare wheels with the Bellan Spare Wheel Clamp, a simple yet effective device that locks the wheel in place.

**WARNING:** Catalytic convertors with their valuable metal components are now at serious risk of theft. Contact Bellan on 01761 463947 to find out how you can secure these items.

## Battery management systems eliminate flat batteries

### Bellan Battery Guard

A flat battery on a vehicle often causes severe delays and unnecessary expense. The Bellan BatteryGuard ensures that enough residual charge is always left in the battery so that you can be certain that your engine will start first time every time.

### Bellan Intelligent Split Charger

For vehicles with twin battery configurations, the split charging options previously available have often proved inefficient and/or expensive. That's why Bellan offers our clients an inexpensive prioritising split charging system.

Unlike typical Split Charging Systems, the Bellan Intelligent Split Charger has the 'intelligence' to determine which battery needs to be re-charged and prioritises accordingly.

## Reversing sensors: the safer way to reverse

### Bellan Reversing Sensors

Accidents due to reversing errors can be extremely expensive, both in terms of time and money. Apart from the risk of accidental damage to vehicles and property, there is the serious threat of personal injury.

With Bellan Reversing Sensors these accidents can largely be avoided. It's like having eyes in the back of your head, letting you know exactly how far you can reverse. Bellan Reversing Sensors are specified by one of the UK's largest Utility Companies.

## Runlock solutions to protect idling vehicles

### Bellan Ignition Override Unit

The Bellan Ignition Override Unit (IOU) is a practical runlock solution to ensure that a vehicle is kept secure from theft even when its engine is running. The IOU enables vehicles to 'tick over' in complete safety without the keys in the ignition.

The Bellan IOU is the ideal solution for multi-drop applications such as couriers, or high-risk applications such as roadside recovery vehicles, which is why the Bellan IOU is specified as standard by both the AA and RAC.
